DHRUV SINGH

Data Engineer | Python | SQL | Spark | Kafka | Airflow | dbt | Azure | GCP
+91 7838019909 | singhd3105@gmail.com | LinkedIn | GitHub | LeetCode

PROFESSIONAL SUMMARY

Data Engineer with 1.5+ years of experience, including internships, in data prep, SQL reporting and automation, plus four pipeline projects covering batch ETL, lakehouse, streaming and cloud warehousing. Built with **Python, PySpark, Kafka, Airflow, dbt, Azure Databricks and BigQuery**, with idempotent loads, quality checks and Docker. Cut a daily data prep task at Galytix from **3 hours to 40 minutes**.

TECHNICAL SKILLS

Languages & Querying: Python, **SQL** (MySQL, SQL Server, BigQuery), Pandas
Data Engineering: ETL/ELT, Batch & Incremental Loads, Medallion Architecture, Dimensional Modeling, Data Quality, Warehousing
Big Data & Streaming: Apache Spark, **PySpark**, Spark Structured Streaming, **Apache Kafka**, Delta Lake
Cloud & Platforms: Azure Databricks, Unity Catalog, Google BigQuery, Google Cloud Platform (GCP), Microsoft Azure
Orchestration & Transformation: Apache Airflow, **dbt Core**, GitHub Actions
Databases & Storage: PostgreSQL (JSONB), MySQL, SQL Server, BigQuery, Delta Lake
DevOps & Integration: Docker, Docker Compose, Git, GitHub, REST APIs, JSON, Postman
Analytics: Power BI, Tableau, Excel (VBA, Power Query)

PROFESSIONAL EXPERIENCE

Technical Solutions Consultant, Certa **Nov 2025 – Present**

- Delivered **10+** custom pre-sales demos and POCs for customers including Neuberger Berman, using automation to get them to Solution Consultants faster; contributed to **4+ closed deals worth ~$2M** (lead demo builder on 2).
- Configured JSON workflows and tested REST APIs in Postman to deliver integrations including ID-Pal (identity verification) and RapidRatings (financial health ratings), working with Product and Engineering to fix issues found during implementation.
- Translated client requirements into **18+ automated workflows** and event-condition-action (ECA) rules for vendor onboarding, ESG and Third-Party Risk Management (TPRM), across parent and child workflows.
- Contributed to **5+ RFI/RFP responses**, documenting solution approaches, workflow designs and integration requirements.
- Partnered with Product and Engineering to test Certa's Design agent (AI workflow builder) and set up the Contracts Agent that analyzes vendor contracts and documents; resolved client and Solution Consultant issues found along the way.

Data Analyst Intern, Galytix **Apr 2025 – Oct 2025**

- Replaced manual data prep with Excel VBA macros and Power Query, cutting a daily per-file task from **3 hours to 40 minutes** and enabling **6–8 financial reports** to be processed per day, depending on file size.
- Standardized annual and quarterly filing data for the CREDITX Structured Lending Model, giving the Quant team consistent inputs.
- Validated datasets with the Quant team before modeling and fixed the inconsistencies and quality issues found.

Data Analyst Intern, Register Karo **Feb 2025 – Mar 2025**

- Consolidated the company's scattered, unstructured data into a centralized pipeline in the founder's office, where no data team existed, working directly with the co-founder, who used the analysis to make business decisions.
- Queried **857K** customer, order and marketing records in SQL to build **4 Zoho dashboards** for stakeholder reporting on operations turnaround, campaign performance, ad revenue, cost and ROAS, and HR performance.
- Automated recurring reports with Zoho Flow, improving operational efficiency by **25%** and removing hours of manual data cleaning.

DATA ENGINEERING PROJECTS

E-commerce Lakehouse (Olist) | *Azure Databricks, PySpark, Delta Lake, Unity Catalog* GitHub

- Developed a Medallion (Bronze, Silver, Gold) lakehouse on Azure Databricks over 9 Olist source tables (**1.5M+** rows), with PySpark cleaning and data quality checks (**8/8** uniqueness checks passed).
- Modeled Gold fact and dimension tables (fact_orders, fact_order_items, fact_payments, dim_customers, dim_products) and added incremental loads using watermarks, checkpoints and Delta MERGE across two batches (**23,297 + 76,144** orders).

SaaS Cloud Data Warehouse | *GCP BigQuery, dbt Core, Python, GitHub Actions* GitHub

- Designed a B2B SaaS analytics warehouse on BigQuery with raw, staging and intermediate layers over simulated customers, users, plans, subscriptions and invoices generated in Python.
- Set up a dbt Core project with a custom schema-naming macro and a GitHub Actions CI workflow that validates the dbt project.

Real-Time Clickstream Pipeline | *Kafka, PySpark Structured Streaming, Docker* GitHub

- Built a Python producer publishing synthetic clickstream events to a 3-partition Kafka 3.9.1 topic (KRaft mode), consumed by Spark Structured Streaming with an explicit JSON schema.
- Added event validation and a Dead Letter Queue topic, routing malformed JSON and an incomplete purchase event to the DLQ in test runs; containerized the Kafka and Spark infrastructure with Docker Compose.

Weather Data ETL Pipeline | *Python, Airflow, PostgreSQL, Docker* GitHub

- Orchestrated a daily Airflow DAG (Open-Meteo API, Pandas, PostgreSQL) with retries, XCom and a single active run, storing raw JSONB snapshots and structured daily weather records.
- Implemented idempotent UPSERT loads (repeat run kept **8/8** records, zero duplicates) with **9** passing transformation tests, and containerized Airflow and PostgreSQL with Docker Compose.

EDUCATION

B.Tech in Information Technology, Inderprastha Engineering College (CGPA: 7.5) **Dec 2020 – Jul 2024**

CERTIFICATIONS

Microsoft Power BI Data Analyst (Coursera) | Complete Data Analyst Bootcamp (Udemy) | The Ultimate MySQL Bootcamp (Udemy)
